VS-10 Customer and Stakeholder Engagement

1. Purpose and value created

VS-10 keeps the NSI connected, relevant, and responsive to the needs of those it serves. It builds and maintains mutual understanding and trust between the NSI and its users, data providers, partners, and policymakers. Official statistics exist to create public value. To create it, the NSI must understand what stakeholders need, communicate transparently, and keep its products, services, and policies aligned with real-world demand. VS-10 is the voice and the mirror of the NSI: it connects external expectations with internal capabilities and closes the feedback loop across the chain. The value created is **relevance and public value**: the work of the NSI is understood, used, and appreciated by its users, partners, and society, so that the NSI does not just produce data but produces public value.

VS-10 is not a one-way process. It is a continuous two-way dialogue that turns stakeholder insight into better products, improved services, and stronger relationships. It does not move data along the chain; it moves understanding: needs come in, communication and services go out. Producing, approving, and releasing statistical data is outside its scope.

VS-10 corresponds to the horizontal business domain **Engagement**. Its output is an enabling capability, not a data artefact: understood needs, a managed service portfolio, relationships, and impact insight.

PLACEHOLDER: ArchiMate view VS-10 (a) value stream and capabilities

---

2. Relation to the value chain

VS-10 is not a stage in the production line. It sits at the edges of the chain. On one side it faces the data providers and respondents who feed VS-01; on the other, the users who consume the output of VS-06. It channels what it learns inward to shape the whole chain. It has no state transition and no quality gate. It is a secondary consumer of Released Data (State #5): it uses usage and feedback data for needs analysis and impact measurement (see *State #5: Released Data*). What the NSI learns about consumed data (#6) comes back through VS-06.5 and VS-10.

Primary value stream(s)	Provides	Receives
VS-01 Data Acquisition and Ingestion	Relationship management and transparency toward data providers; insight into which data sources and topics matter most to users	Provider needs, feedback, and issues; willingness to provide data
VS-05 Statistical Product Composition, VS-06 Dissemination and Service Delivery	Service requirements and user expectations; the outputs and formats users prefer	Usage and satisfaction data (VS-06.5 Monitor Usage and Feedback)
Design across VS-01 to VS-06	User needs and service requirements	New and improved products and services

VS-10 aligns to GAMSO rather than to GSBPM production phases.

GAMSO area	Relevance to VS-10
Strategy and Leadership	Manage stakeholder and customer relationships; align the service portfolio to the strategy
Corporate Support	Manage communications, marketing, user support, and service management

PLACEHOLDER: ArchiMate view VS-10 (c) interactions with the value chain: data providers and respondents engaged two-way at the entry of VS-01, users and society engaged two-way after VS-06, usage and feedback from VS-06.5 into VS-10, and user needs routed into design across VS-01 to VS-06 and into the VS-08 innovation backlog

3. Stages

The six stages form a continuous engagement cycle: understand (VS-10.1, VS-10.2), offer (VS-10.3), deliver (VS-10.4, VS-10.5), and measure (VS-10.6). The insight from VS-10.6 feeds the next cycle, so that the next round of needs is better understood.

Stage	Name	Value added
VS-10.1	Identify and Segment Stakeholders	The NSI knows its users, providers and partners
VS-10.2	Collect and Analyse User Needs	Needs are translated into requirements
VS-10.3	Define and Manage Service Portfolios	Services and products match the needs
VS-10.4	Deliver Services and Manage Relationships	Users and partners are served
VS-10.5	Engage and Communicate with Stakeholders	Stakeholders understand the output
VS-10.6	Monitor Impact and Satisfaction	The NSI knows its impact and acts on it

Each stage below is described with its activities. The column *SAF process* shows the business process from *Business Processes* that the activity belongs to. The column *Other reference* shows the principles, capabilities, or external frameworks that the activity applies.

VS-10.1 Identify and Segment Stakeholders

Value created: *The NSI knows who its users, data providers, and partners are, and what they expect.*

The cycle begins by mapping the ecosystem of stakeholders: users, data providers, partners, and policymakers. For each group, the team describes its role and its expectations of the NSI. Users are grouped into segments, because their needs differ widely, so that services and channels can be designed per segment. Partners include other producers of official statistics, international statistical organisations, and the participants of the data spaces in which the NSI takes part.

Activity	Key outputs	SAF process	Other reference
Map the stakeholder ecosystem: users, data providers, partners, policymakers	Stakeholder map	PRD-1.2 Consult and confirm needs	3.4.2 Contact management
Understand the roles and expectations of each stakeholder group	Stakeholder map	PRD-1.2 Consult and confirm needs	
Segment users by need and use	User segments	PRD-1.2 Consult and confirm needs	GAMSO Manage Consumers
Identify partners in the statistical system and in data spaces	Partner overview	DSP-6 Participate in data space governance	4.1.6 Collaboration; COL-02, COL-03

VS-10.2 Collect and Analyse User Needs

Value created: *Stakeholder needs are understood and translated into concrete data or service requirements.*

VS-10 gathers feedback and runs consultations with the segments identified in VS-10.1. It analyses what it hears and records the needs in a needs register. Each need is translated into a concrete data or service requirement. Requirements are routed to the design of the primary value streams that can meet them. A need that calls for a new method, source, or tool goes to the innovation backlog of VS-08. VS-10 also tells VS-01 which data sources and topics matter most to users.

Activity	Key outputs	SAF process	Other reference
Gather feedback and run consultations	Consultation results	PRD-1.2 Consult and confirm needs	2.2.5 User research
Analyse needs and record them in the needs register	User-needs register	PRD-1.1 Identify needs	1.1.1 Needs inventory
Translate needs into data or service requirements	Service requirements	PRD-1.1 Identify needs	1.1.1 Needs inventory
Route requirements to design across VS-01 to VS-06, and user-driven innovation needs to VS-08	*Need routed to design/innovation*	PRD-1.1 Identify needs	VS-08.1 Identify Innovation Needs and Opportunities

VS-10.3 Define and Manage Service Portfolios

Value created: *A portfolio of services and products that addresses stakeholder needs and serves the strategy.*

The needs shape the portfolio: the catalogue of business services and data products that address stakeholder needs and align with the strategic goals of the NSI. The portfolio is the bridge between what users want

and what the chain produces. It shows which outputs and formats users prefer, which guides VS-05 and VS-06. Each service has a service standard against which its performance is measured in VS-10.4.

Activity	Key outputs	SAF process	Other reference
Define the catalogue of services and data products per segment	Service and product portfolio	PRD-2.1 Design outputs and dissemination	3.4.1 Services management
Align the portfolio with the strategic goals	Service and product portfolio	PRD-2.1 Design outputs and dissemination	4.1.2 Policy and planning; GAMSO Strategy and Leadership
Set the service standard for each service	Service standards	PRD-2.1 Design outputs and dissemination	3.4.3 Service agreement
Specify the outputs and formats users prefer, for VS-05 and VS-06	Service requirements	PRD-2.1 Design outputs and dissemination	

VS-10.4 Deliver Services and Manage Relationships

Value created: *Users and partners are served, and relationships are actively maintained.*

Services reach users through customer support, service desks, and account management. Key data providers, partners, and policy users have an account or relationship manager, so that the NSI speaks with one voice to each of them. With data providers, VS-10 is transparent about how their data is used and protected, and it passes provider needs and issues to VS-01. Researchers who use microdata services get support with content, metadata, and the rules of use. Satisfaction and service performance are monitored against the service standard.

Activity	Key outputs	SAF process	Other reference
Operate the service desk and user support	Support records	PRD-7.5 Provide user support	3.4.4 Self-service
Manage relationships with key users, partners, and policy users	Relationship records	PRD-7.5 Provide user support	3.4.2 Contact management
Manage relationships with data providers, with transparency on data use and protection	Relationship records, provider needs	OVA-6 Data Supplier Management	COL-01; SAF-P11
Support researchers in the use of microdata services	Researcher support records	MDS-6 Support researchers	COL-04
Monitor service performance and satisfaction against the service standard	Service performance report	PRD-7.5 Provide user support	3.4.3 Service agreement

VS-10.5 Engage and Communicate with Stakeholders

Value created: *Stakeholders are aware of the statistics and understand them correctly.*

Alongside delivery, VS-10 engages with stakeholders through outreach, workshops, and knowledge-sharing events. The aim is awareness and correct understanding of statistical outputs. Transparent communication about data ethics, confidentiality, and quality also builds trust and strengthens VS-07.

Activity	Key outputs	SAF process	Other reference
Run outreach to user segments	Outreach campaigns	PRD-7.4 Promote dissemination products	1.5.2 Promotion to use

Activity	Key outputs	SAF process	Other reference
Hold workshops and knowledge-sharing events	Events, participation records	PRD-7.4 Promote dissemination products	3.1.4 Communication management
Communicate transparently about data ethics, confidentiality, and quality	Public communication	PRD-7.4 Promote dissemination products	4.1.5 Accountability; SAF-P11

VS-10.6 Monitor Impact and Satisfaction

Value created: *The NSI knows how its data and services are used and what impact they have, and acts on it.*

VS-10 measures how data and services are used and assesses their societal impact. It receives usage and satisfaction data from VS-06.5 and runs its own satisfaction surveys. It documents uses of official statistics in policy, research, and media. The insight goes back into planning and innovation, which closes the loop: the next cycle of needs starts from it.

Activity	Key outputs	SAF process	Other reference
Collect usage and satisfaction data from VS-06.5	Usage insight	PRD-8.1 Gather evaluation inputs	
Measure satisfaction across user segments and services	Satisfaction scores	PRD-8.1 Gather evaluation inputs	
Document uses of official statistics in policy, research, and media	Impact evidence	PRD-8.2 Conduct evaluation	4.1.5 Accountability
Assess societal impact and feed the insight into planning (VS-10.1, VS-10.2) and innovation (VS-08)	Impact and satisfaction insight	PRD-8.2 Conduct evaluation	4.1.4 Improvement management

4. Plan, build, operate, and improve

VS-10 is itself a capability that is planned, built, operated, and improved. Unlike a primary value stream, it produces relevance, relationships, and insight, not statistical data, and it runs as a continuous dialogue rather than a production run per cycle.

Cycle step	What happens in VS-10	Main outputs	SAF process
Plan	Design the engagement strategy and the portfolio model	Engagement strategy, portfolio model	PRD-1.2 Consult and confirm needs; PRD-2.1 Design outputs and dissemination
Build	Build support and feedback channels, with VS-09	Service desk, consultation, and feedback channels	PRD-3.3 Reuse or build dissemination components
Operate	Run the continuous dialogue, user support, and communication (VS-10.1 to VS-10.5)	Needs register, managed relationships, communication	PRD-7.4 Promote dissemination products; PRD-7.5 Provide user support

Cycle step	What happens in VS-10	Main outputs	SAF process
Improve	Use the insight of VS-10.6 to improve engagement and the portfolio; retire services that no longer meet a need	Impact and satisfaction insight, portfolio changes	PRD-8.2 Conduct evaluation; PRD-8.3 Agree an action plan

Business objects

VS-10 manages enabling artefacts that carry user insight into the rest of the chain. They are maintained continuously rather than versioned per production cycle. Each artefact nevertheless has a designated owner and a managed life cycle (SAF-P03): changes are tracked and outdated entries are retired.

Business object	Produced in
Stakeholder map and segments	VS-10.1
User-needs register and service requirements	VS-10.2
Service and product portfolio	VS-10.3
Relationship and support records	VS-10.4
Impact and satisfaction metrics	VS-10.6

5. Actors and roles

The roles below are indicative, not a mandated organisational structure. The SAF leaves organisation design to each NSI, which assigns these responsibilities to fit its own size, culture, and operating model. The specialised role names used in VS-10 map onto reference roles (see *Role names in the value streams*).

Actor or role	ID	Process type	Responsibility in VS-10
Data user	ACT-05	External	Policy makers, researchers, media, businesses, and the public; express needs, give feedback, use services
Data provider	ACT-03	External	Engaged on its needs and on how its data is used and protected
Respondent	ACT-04	External	Engaged on burden and on why the NSI needs the data
Other producer of official statistics	ACT-06	External	Partner in the national statistical system (COL-02)
International statistical organisation	ACT-07	External	User and partner in international cooperation (COL-03)
Process owner	ROL-01	Management	Accountable for the end-to-end performance of VS-10
Head of Communication / Engagement	ROL-23 Relationship manager	Plan	Owns the stakeholder strategy and the external relationship
User Researcher	ROL-23 Relationship manager	Operate	Collects and analyses user needs and satisfaction

Actor or role	ID	Process type	Responsibility in VS-10
Account / Relationship Manager	ROL-23 Relationship manager	Operate	Manages relationships with key providers, partners, and policy users
Communications / Outreach Officer	ROL-23 Relationship manager	Operate	Runs outreach, workshops, and knowledge-sharing events
Impact Analyst	ROL-23 Relationship manager	Improve	Measures use, societal impact, and satisfaction
Service / Product Portfolio Manager	ROL-22 Dissemination and service manager	Plan	Defines and manages the catalogue of services and data products
Service Desk / User Support	ROL-22 Dissemination and service manager	Operate	Operates day-to-day user support
Statistical designer	ROL-06	Design (primary streams)	Receives the requirements routed from VS-10.2 into the design of products

6. Capabilities, processes, and functions

Capability foundations

Capability group	Capabilities	Role in VS-10
1.1 Statistical design and build	1.1.1 Needs inventory	Identify the demand for statistical information through relationships with users and stakeholders
1.5 Dissemination	1.5.2 Promotion to use	Promote statistical output to users
2.2 Research	2.2.5 User research	Collect and assess user needs and translate them into statistical output
3.1 Business operations	3.1.4 Communication management	Communicate with internal and external parties
3.4 Customer and chain interaction	3.4.1 Services management, 3.4.2 Contact management, 3.4.3 Service agreement, 3.4.4 Self-service	Manage the service portfolio, relationships, service standards, and self-service
4.1 Strategy and leadership	4.1.4 Improvement management, 4.1.5 Accountability, 4.1.6 Collaboration	Feed insight into improvement, report on impact, maintain strategic relationships

Stages, processes, and functions

Stage	Realised by processes	Main functions
VS-10.1 Identify and Segment Stakeholders	PRD-1.2 Consult and confirm needs; DSP-6 Participate in data space governance	FUN-1.3 Manage strategic collaboration; FUN-10.9 Manage users and services
VS-10.2 Collect and Analyse User Needs	PRD-1.1 Identify needs; PRD-1.2 Consult and confirm needs	FUN-3.1 Design and build statistical products; FUN-10.9 Manage users and services
VS-10.3 Define and Manage Service Portfolios	PRD-2.1 Design outputs and dissemination	FUN-10.9 Manage users and services

Stage	Realised by processes	Main functions
VS-10.4 Deliver Services and Manage Relationships	PRD-7.5 Provide user support; MDS-6 Support researchers; OVA-6 Data Supplier Management	FUN-6.1 Manage data supplier relationships; FUN-10.9 Manage users and services
VS-10.5 Engage and Communicate with Stakeholders	PRD-7.4 Promote dissemination products	FUN-1.4 Build public confidence; FUN-10.6 Manage communication
VS-10.6 Monitor Impact and Satisfaction	PRD-8.1 Gather evaluation inputs; PRD-8.2 Conduct evaluation	FUN-5.2 Assure and review quality; FUN-10.9 Manage users and services

PLACEHOLDER: ArchiMate view VS-10 (b) stages realised by processes and functions

Framework mappings

Cycle step	SAF business processes	GSBPM	GAMSO	SAF capabilities
Plan	PRD-1.1, PRD-1.2, PRD-2.1	1.1, 1.2, 2.1	Strategy and Leadership	1.1.1 Needs inventory, 3.4.1 Services management
Build	PRD-3.3	3.3	Capability Management	3.4.4 Self-service
Operate	PRD-7.4, PRD-7.5, MDS-6, OVA-6, DSP-6	7.4, 7.5	Corporate Support (Manage Consumers, communication)	1.5.2 Promotion to use, 3.1.4 Communication management, 3.4.2 Contact management, 4.1.6 Collaboration
Improve	PRD-8.1, PRD-8.2, PRD-8.3	8.1 to 8.3	Strategy and Leadership; Capability Management	2.2.5 User research, 4.1.4 Improvement management, 4.1.5 Accountability

7. Principles

VS-10 foregrounds SAF-P04, SAF-P08, and SAF-P02. It also applies SAF-P11 in its dialogue with providers and users.

Principle	Statement	Application in VS-10
SAF-P04	Maximise the benefits for the organisation	Keeps the whole chain aligned to real stakeholder value and public benefit
SAF-P08	Data is shared property	Promotes broad, equitable access to and reuse of statistics and services
SAF-P02	Active support	Runs user support and service management as actively managed services

Principle	Statement	Application in VS-10
SAF-P11	Privacy By Design	Engages data providers and users with transparency about how their data is used and protected

8. Interfaces, services, and events

Business services

Service	Offered to	Realised in	Interfaces
Needs analysis service	Design across VS-01 to VS-06, VS-08	VS-10.2 Collect and Analyse User Needs	Consultations, user-needs register, service requirements
Service and product portfolio	Users, primary value streams	VS-10.3 Define and Manage Service Portfolios	Service catalogue, service standards
User support service	Users, researchers	VS-10.4 Deliver Services and Manage Relationships	Service desk, self-service, account management
Provider relationship service	Data providers (via VS-01)	VS-10.4 Deliver Services and Manage Relationships	Relationship manager
Communication and outreach service	Users and society	VS-10.5 Engage and Communicate with Stakeholders	Outreach campaigns, workshops, knowledge-sharing events
Impact and satisfaction insight	Process owners, planning, VS-08	VS-10.6 Monitor Impact and Satisfaction	Satisfaction and impact reports

Business events

Event	Counterpart	Triggers or marks
User need captured	Users and society	Entry of a need in the needs register (VS-10.2)
Consultation	Users and society	A structured gathering of needs and feedback (VS-10.2)
Service request	Users and society	Start of user support (VS-10.4)
Provider engagement	Data providers (via VS-01)	Contact on provider needs, burden, or data use (VS-10.4)
Feedback received	VS-06 Dissemination and Service Delivery	Arrival of usage and satisfaction data from VS-06.5 (VS-10.6)
Need routed to design/innovation	Design across VS-01 to VS-06, VS-08	Handover of a requirement to design or to the innovation backlog (VS-10.2)

Interaction with the primary value streams

Value stream	Interaction	Event
VS-01 Data Acquisition and Ingestion	VS-10 manages the relationship with data providers and passes their needs and issues; VS-01 reports provider feedback and rejected deliveries	*Provider engagement*

Value stream	Interaction	Event
VS-05 Statistical Product Composition	VS-10 passes the outputs and formats users prefer	*Need routed to design/innovation*
VS-06 Dissemination and Service Delivery	VS-10 passes service requirements and user expectations; VS-06.5 sends usage and satisfaction data	*Feedback received*
Design across VS-01 to VS-06	VS-10 routes user needs and service requirements; it receives new and improved products and services	*Need routed to design/innovation*

Interaction with the other supporting value streams

Value stream	Provides to VS-10	Receives from VS-10
VS-07 Governance and Compliance	Policies on data ethics, confidentiality, and quality	Transparent communication about data ethics, confidentiality, and quality; impact evidence for accountability
VS-08 Innovation and Methodological Development	New and improved products and services	User-driven innovation needs, ideas and feedback from users and partners
VS-09 Infrastructure and Platform Enablement	Support and feedback channels	Requirements for channels and portals

9. Key performance indicators

KPI	Description	Measurement
User satisfaction	Satisfaction score across user segments and services	Per survey wave, per segment
Needs conversion	Share of captured needs converted into requirements routed to design or innovation	Per planning period
Service performance	Support response and resolution times against the service standard	Monthly
Reach and engagement	Participation in consultations and outreach; channel reach across segments	Per campaign, annually
Impact evidence	Documented uses of official statistics in policy, research, and media	Annually

10. Examples

PLACEHOLDER: VS-10 examples to be added, for example a user consultation that leads to a new product, a provider engagement that reduces burden, and an impact report built from VS-06.5 usage data

Toolkit: SAF-TK-V10 VS-10 maturity checklist and scenarios
